

Figuresheets' - Population statistics for the Isle of Wight

The following pages provide data sets that offer a breakdown of population numbers across the Isle of Wight. All of the information given in the following sheets has been extracted from data supplied by the Office for National Statistics (ONS).

The principal set of projections for population use a geographical area referred to as Lower Layer Super Output Areas (LSOAs). These were developed in conjunction with the 2011 Census and help to provide a level of consistency when comparing results over a number of different years. Two tables have been included using this format, with the results split across five age bands, with the second table also including the breakdown by male and female gender.

The third table offers an overview to the changes that have occurred in population between 2013 and 2014, which also identifies in the broadest possible terms the way in which each annual population estimate is arrived at.

A fourth table provides a breakdown of the overall population number by single years of age between 0 years and 90 plus years. This may be of some assistance where numbers for individuals in a single year, or range of ages is needed. However, the ONS itself identifies that there is an increased opportunity for inaccuracy when the estimations are taken down to this level and a degree of caution should be taken with how these figures are applied. (See also the notes overleaf.)

The final set of tables are projected numbers for people living in each of the current set of Electoral Wards, with numbers broken down across a range of age bands and by gender. There is also a summary breakdown which considers the numbers of people in the 16-64 age band only (working age).
