

Figuresheets' - Population statistics for the Isle of Wight

The following pages provide data sets that offer a breakdown of population numbers across the Isle of Wight. All of the information given in the following sheets has been extracted from data supplied by the Office for National Statistics (ONS).

The principal set of projections for population use a geographical area referred to as Lower Layer Super Output Areas (LSOAs). These were developed in conjunction with the 2011 Census and help to provide a level of consistency when comparing results over a number of different years.

The first table shows the Isle of Wight population by single year of age and also including the breakdown by male and female gender. This may be of some assistance where numbers for individuals in a single year, or range of ages is needed. However, the ONS itself identifies that there is an increased opportunity for inaccuracy when the estimations are taken down to this level and a degree of caution should be taken with how these figures are applied.

The second table offers an overview to the changes that have occurred in population between 2015 and 2016.

The third and fourth tables provide the breakdown by LSOA, the third for the Isle of Wight as a whole and the fourth also by gender.

The final two tables are projected numbers for people living in each of the current set of Electoral Wards, with numbers broken down across a range of age bands and by gender.
